

EPC2216 – Enhancement Mode Power Transistor

 $V_{DS}, 15\text{ V}$
 $R_{DS(on)}, 26\text{ m}\Omega$
 $I_D, 3.4\text{ A}$

RoHS

Halogen-Free

Gallium Nitride's exceptionally high electron mobility and low temperature coefficient allows very low $R_{DS(on)}$, while its lateral device structure and majority carrier diode provide exceptionally low Q_G and zero Q_{RR} . The end result is a device that can handle tasks where very high switching frequency, and low on-time are beneficial as well as those where on-state losses dominate.
